SPECKLED RUBBER TILE AND TREAD

Safety
and style
go hand in hand.

The image shows a modern library or study area. In the foreground, there's a wooden desk with a laptop and a modern chair with a dark seat and light wood frame. The floor is made of large, light-colored geometric tiles in shades of grey and purple. In the background, there are wooden bookshelves filled with books, a study table with chairs, and a large window. The overall atmosphere is bright and functional.

**Good design for
people + planet.**

The importance of interior design stretches far beyond aesthetics. Today's interiors are expected to support the comfort, productivity and wellness of every occupant. With excellent slip-resistance, rubber tile can help reduce slip-and-fall accidents—while also cushioning underfoot and softening acoustics. We've combined these natural properties with gentle color combinations inspired by the outdoors, and manufactured them in a facility that's powered by 100% renewable electricity. It's the perfect union of safety and style—for both people and the planet.

The right stairwell management system improves both the safety and appearance of these critical spaces, helping reduce risk and improve mobility from top to bottom. With thousands of possible combinations, Tarkett's comprehensive stairwell management system provides no shortage of options. Combined with Color Splash rubber tile, our complete system of products helps balance the needs of every project.

Healthy materials and a healthy planet.

When you partner with Tarkett, your flooring choices actively support the health of people and our environment. We've aligned our company with Cradle to Cradle® principles, bringing you product solutions made with healthy materials and sustainable manufacturing processes, backed by our company-wide commitment to building a healthy, circular economy.

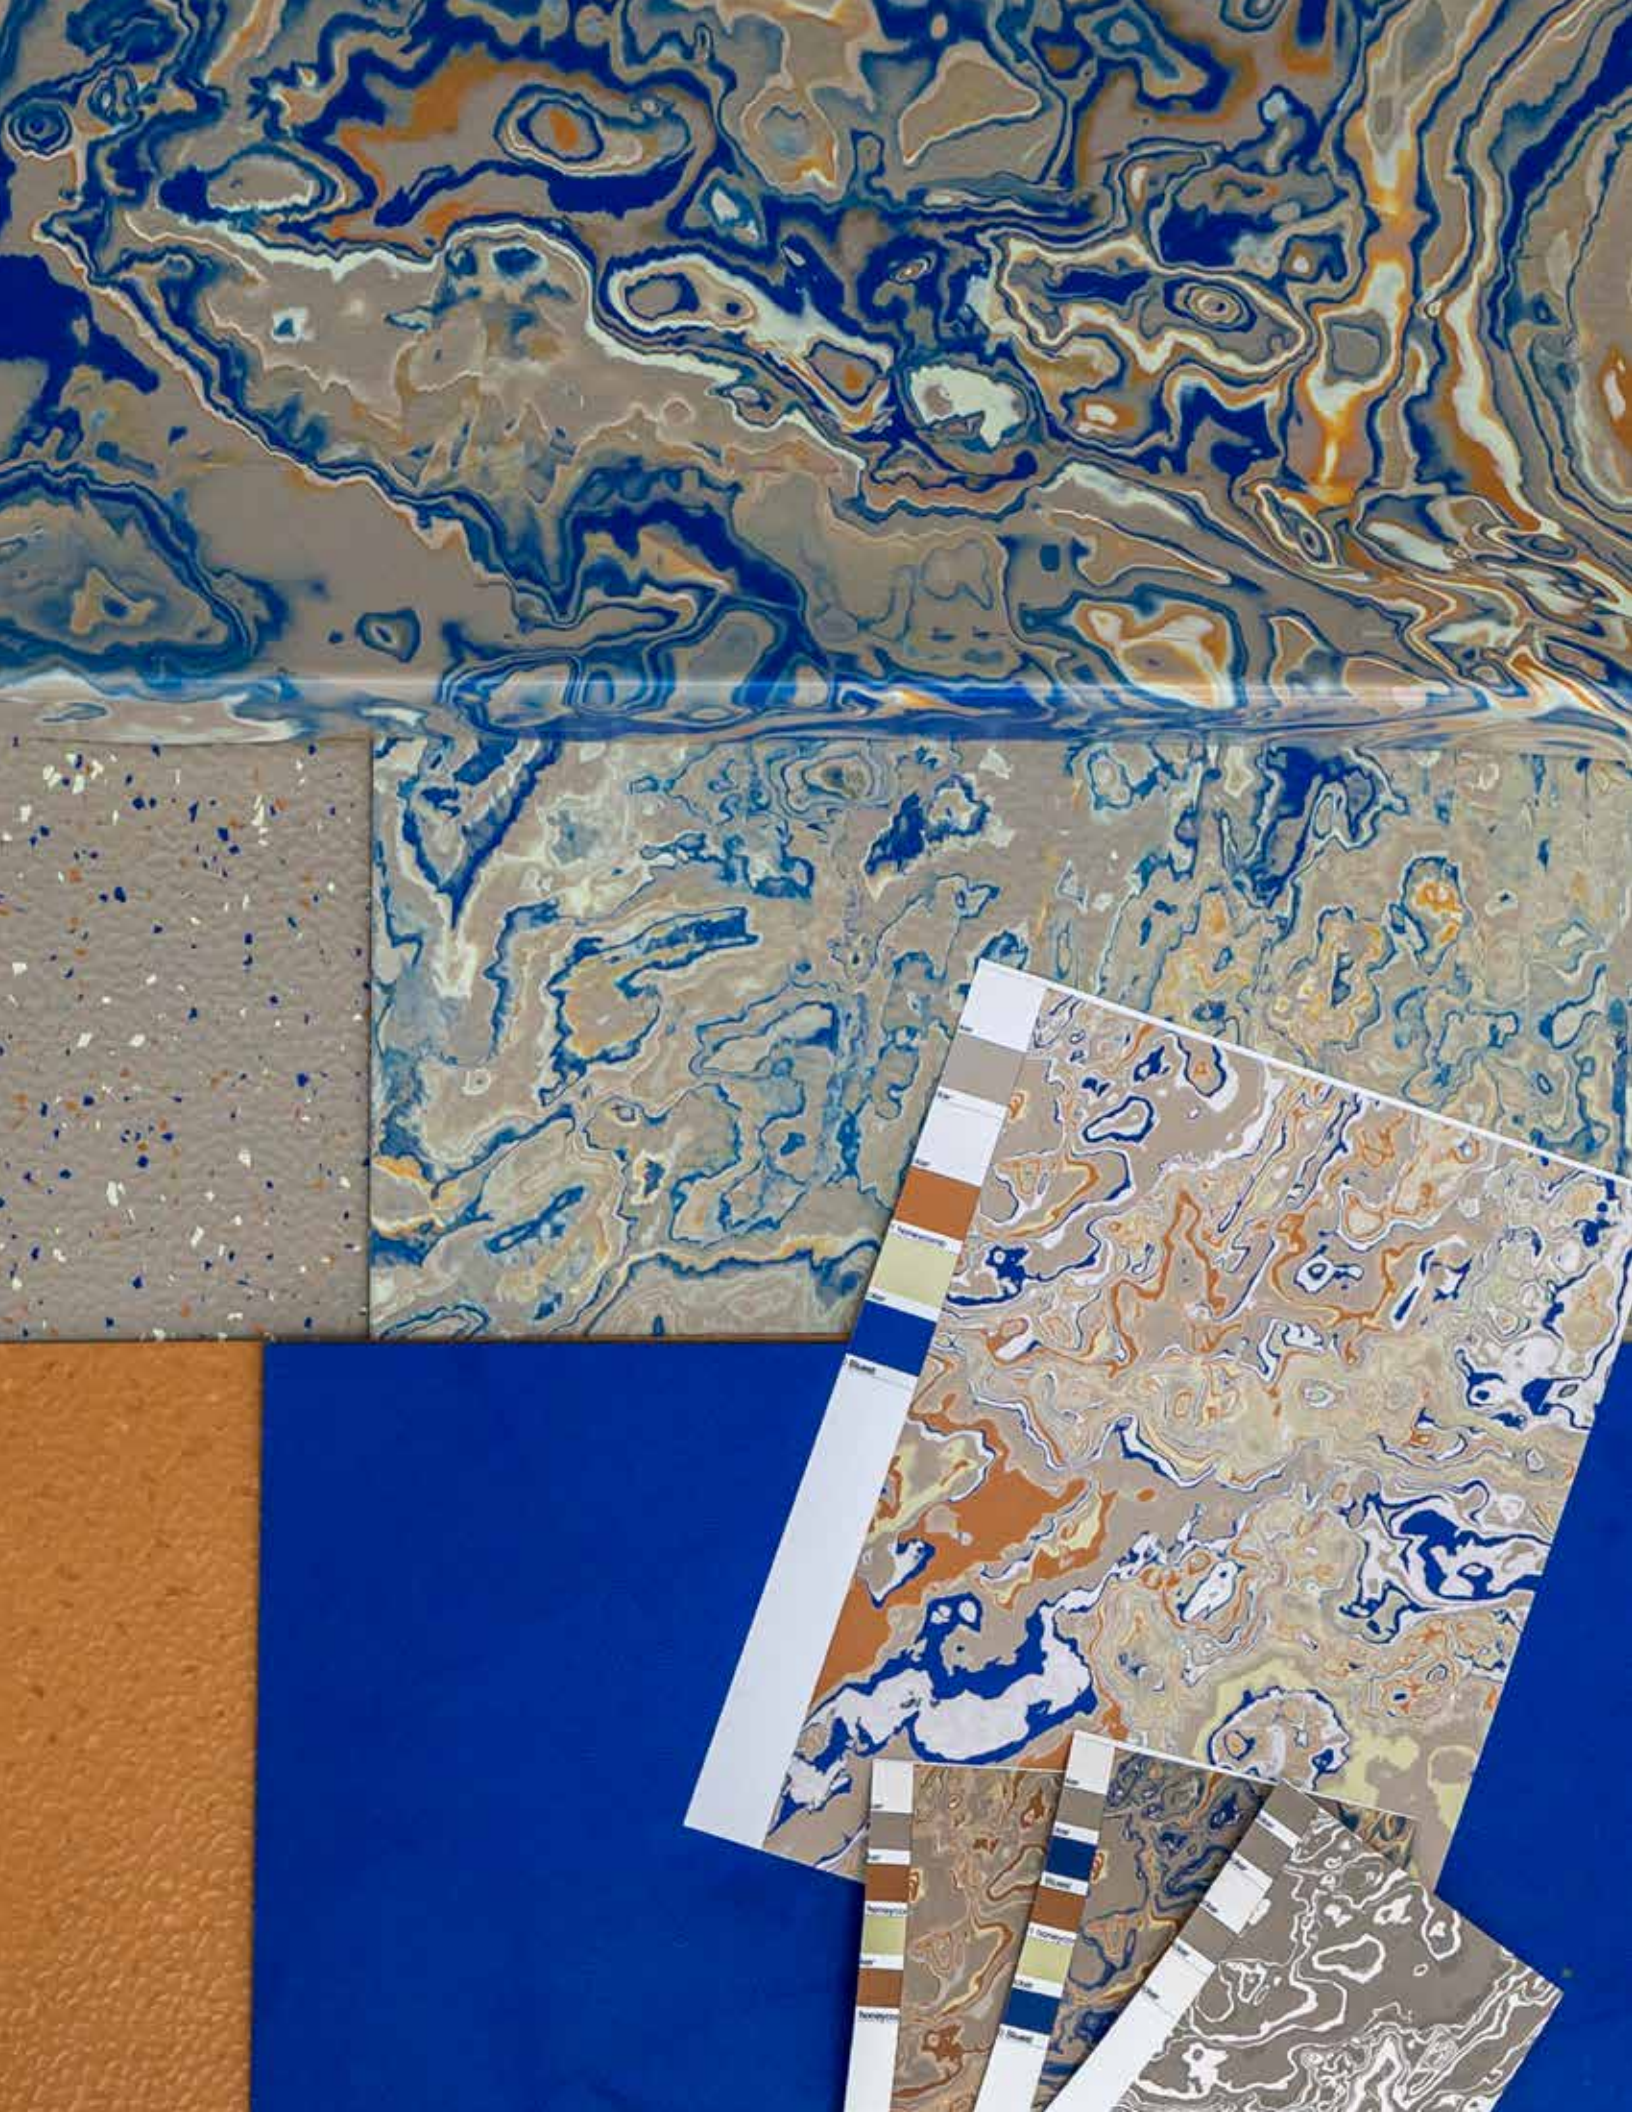

We'll match
any color.
Without
dye lots.

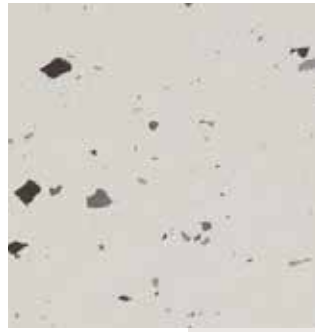

You could say we're a bit obsessive about color. Our industry-leading Color Match technology for rubber flooring lets us create any running line or custom color—precisely, every time, without dye lots. With Color Splash rubber tile, you can customize the field color or the accents, and carry the same tailored palette across other Tarkett surfaces for a fully unified space.

Doing good. Together.

At Tarkett North America, we believe that together, we can make a positive impact on people and the planet. That's why we're Doing Good—Together, connecting our sustainability efforts with what our customers value and our world needs. It's an active, living commitment to create a future where people and the planet prosper in balance. Where sustainable flooring solutions don't just perform. They inspire.

Cradle to Cradle™ certification guides our eco-design approach on the basis of five criteria: material health, product circularity, renewable energy and climate requirements, water stewardship, and social fairness.

Staying aligned with the Cradle to Cradle Certified Products Program (along with circular economy principles) has helped us assess our positive and negative impacts upon the environment and people's health. By following these design principles for health and wellness, we have created phthalate-free, low-TVOC, carbon-neutral products in both the resilient, and soft surface categories.

Through this process, we have: reduced our energy use; converted factories in Ohio, Sweden and Italy to renewable energy; utilized recycled materials in our products to create a product portfolio of carbon neutral products; and we have partnered on global projects for our offsetting - including support of international renewable energy initiatives, and reforestation of the Peruvian Amazon. Through our support of the Tambopata National

Reserve and the Bahuaja-Sorene National Park, we've helped to project nearly 1.5 million acres and restore 10,000 acres—an action expected to avoid over 4 million tons of carbon emissions by 2021.

We are often asked to simplify our sustainability story. The truth is that making a positive impact on our world and its citizens is not so simple. Reducing the use of fossil fuels and incorporating recycled materials into our products can pose challenges, but Tarkett is working hard to make these improvements—because we value your health, and that of our environment. In our ongoing efforts to promote sustainability, achieving carbon neutrality is just one more step toward creating a better world.

At Tarkett, our approach to sustainability is woven into the fabric of how we do business. To us, it's not a bolt on, or something to 'bear in mind,' it sits at the very heart of our day-to-day decision making. We have three main areas of focus:

Our commitment is founded on three central pillars:

CIRCULAR ECONOMY

Closing the loop on waste, preserving our planet's natural resources and reducing the impact on climate change.

GOOD MATERIALS

Subjecting ourselves to relentless scientific scrutiny and offering radical transparency about our products.

INDOOR AIR QUALITY

A commitment to your health and well-being. Creating healthy indoor spaces with the highest standards of Indoor Air Quality.

A commitment to creating a circular economy. Closing the loop on waste, preserving our planet's natural resources and reducing the impact on climate change.

A commitment to only using good materials. Subjecting ourselves to relentless scientific scrutiny and offering radical transparency about our products.

A commitment to your health and wellbeing. Creating healthy indoor spaces with the highest standards of Indoor Air Quality.

Acting on climate change is an imperative for all of us. At Tarkett, we're accelerating our efforts in the areas where we can make the greatest positive impact. Part of our commitment is creating carbon-neutral products with better materials for both people and the planet. With the help of third-party measurements and certifications, we've been measuring our carbon footprint, reducing our energy use, and moving our facilities to renewable energy, and offsetting what we have not been able to reduce.

Color Splash Rubber Tile is third-party verified carbon neutral and manufactured in a facility that operates on 100% renewable electricity and 97% recycled water.

Our rubber tile has gone through the rigid cradle to cradle principles to receive a Cradle to Cradle Bronze certification, in addition to meeting the standards for Declare and Living Product Challenge.
